

HEADLESS AUTHORING EXPERIENCE

SUSTAINABLE OPEN SOURCE

HAX is built on the "Web component" browser standard, meaning it is custom HTML blocks that work in any browser and any platform! HAX blocks are small, semantic, accessible, and engineered to work forever just like traditional HTML.

GREAT EXPERIENCE

Authoring Experience drives, or limits, creativity. A fluid experience, empowers instructors and instructional designers to focus on engaging course experiences and less on the act of building it. HAX revolutionizes authoring, to revolutionize courses!

INSTRUCTIONAL PIPELINE

Penn State College of Information Sciences and Technology students directly contribute to HAX through course projects. Several core courses use HAX both to teach and as a real world context to teaching web development through open contribution.
